

Invented for life

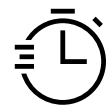

Universal **QUICK FIT** Tire Pressure Monitoring System Sensors

Since 2007, all new vehicles within the US must be equipped with a tire pressure monitoring system (TPMS). Bosch Universal TPMS Sensors measure the air pressure directly on the vehicle's tires and reliably transmit it by radio to the control unit in real time. Continuous monitoring of the tire pressure prevents unnoticed pressure deviations – making an important contribution to road safety. Adherence to the recommended tire pressure also ensures optimized fuel consumption and reduced tire wear.

High vehicle coverage
with just a few part numbers

Time saving due to
easy programming and
mounting (**QUICK FIT**)

Quality and reliability at
Original Equipment level

Order numbers

Clamp-in Metal Valve – Silver: F026C00470
Snap-in Rubber Valve – Black: F026C00471

Advantages at a glance:

- ▶ **Universally programmable:** Over 90% vehicle coverage with just two part numbers
- ▶ **Available in a rubber and steel version,** with matching steel and aluminum rim design
- ▶ **Function and quality tests** according to the same standards as Original Equipment

Everything from a single source:

TPA 300 programming tool and
Technical Support

For easy and safe commissioning, Bosch recommends using the Bosch TPA 300 programming tool. In combination with its Technical Support, Bosch offers a complete solution that enables workshops to diagnose, remove and install – as well as commission – spare parts.
