## Beam Technology

*FOCUS™, ICON™, Evolution™, Clear Advantage™, Snow Driver™*

Each year, more and more vehicles are equipped with beam blades as original equipment. Beam windshield wipers are designed without joints, hinges, metal or plastic brackets. Instead, these blades have a single beam design and tension memory bending process that provides improved performance over hybrid and conventional windshield wipers.

## Hybrid Technology

*InSight™*

Another type of blade that comes standard on many vehicles is the hybrid blade. Most of these blades have the framework of a conventional blade, but the aerodynamics of a beam blade. The Bosch Hybrid blade, however, utilizes our patented beam technology to incorporate a better wiping quality.

## Conventional Technology

*Excel+™, MicroEdge™, DirectConnect™*

The most recognized category is called a conventional blade. Conventional blades have a metal framework that holds the rubber in place. Drivers who use conventional blades may opt to upgrade to a beam blade for the winter season to minimize snow and ice build-up that can collect in the frame and affect wiping quality of a conventional windshield wiper.
